

Drainage Committee Report

January 2026 Monthly Meeting

The Drainage and Infrastructure Committee held a virtual meeting with Tommy Holt of G3 Engineering on December the 16th. We discussed a proposal for a drainage inventory study; a document that would help give us something to file with the county for future drainage planing and participation. I received an email from Tommy this week, offering a different proposal. He doesn't believe we have enough actual infrastructure in place to warrant a stand alone study and the idea of measuring each and every linear foot of open ditch would be unreasonably expensive. His suggestion is a triaged list for site specific analysis. This falls in line with recommendations made in the Clemson Capstone Presentation and allows us to preserve capital for repairs. We would be able to start identifying specific areas by mid February.

Anyone that would like to participate with the drainage committee is welcome to email me at cahall17@yahoo.com. The function of the committee for 2026 will be taking recommendations from the G3 study and turning them into proposals for the long range infrastructure committee to recommend to the board. We are also going to create a reporting form so that we can track issues and have a record of how it was resolved. Probably a certain amount of hard labor at some point along the way too.
